LEARNING TRANSCRIPT

LEARNING COMPONENTS

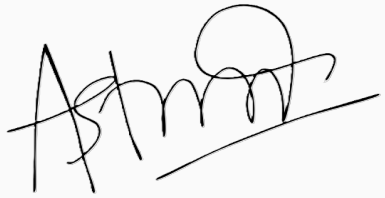

Division Description

The Applied AI & Information Systems Division focuses on the practical application of Artificial Intelligence in the development and optimization of information systems. The division emphasizes integrating AI solutions into real-world systems to support data analysis, process automation, and decision-making. Activities are carried out through project-based tasks that reflect actual organizational and business needs.

Intern Roles and Responsibilities

Interns in this division are involved in supporting the development and implementation of AI-enabled information systems. Their responsibilities include assisting in data preparation and analysis, contributing to the development and testing of AI or machine learning models, supporting system integration and dashboard development, and documenting project outcomes. Through these activities, interns gain hands-on experience in applying AI within information systems in a professional working environment.
